

"A SELF-FED SHREDDER DEVICE FOR SHAVINGS-REMOVING
MACHINE TOOLS"

Abstract of the description

A self-fed shredder device for shavings-removing machine tools, comprising a channel element (3) in which extends a motorised auger conveyor (4) whose terminal end (7) traverses an internally grooved cylindrical body (14) and bears a lobed rotor (22) axially facing the exterior of the grooved cylindrical body (14). The lobed rotor (20) is able to rotate within a laterally open generally tubular body (20).
